

Synchronizing Repositories in Eclipse

Comparisons between your workspace and the local repository or between the current branch and others and are done via the Synchronize-operation. If you right click Team => Synchronize Workspace, your local workspace will be compared with the current branch showing uncommitted changes. If you select Team => Advanced => Synchronize... , you can select other branches to compare your current branch with. In this case you can also include local uncommitted changes.

To compare the branches you may want to switch to the Synchronizing perspective, where you can get a more detailed view of several changes. Here is an example of a Synchronize operation in the Synchronizing perspective:
